

NAME

symlink – create symbolic link

SYNOPSIS

```
#include <ShoreApp.h>
shrc Shore::symlink(const char *contents, const char *linkname);
```

DESCRIPTION

Symlink creates a symbolic link object named by *linkname* containing character string given by *contents*. Typically, *contents* is a pathname, but in practice, it can be any string. If it is, in fact, a pathname, it need not be on the same file system (the same Shore volume) as *linkname*.

VERSION

This manual page applies to Version 1.1 of the Shore software.

SPONSORSHIP

The Shore project is sponsored by the Advanced Research Project Agency, ARPA order number 018 (formerly 8230), monitored by the U.S. Army Research Laboratory under contract DAAB07-91-C-Q518.
