NAME

>   readlink − read contents of symbolic link

SYNOPSIS

```
#include <ShoreApp.h>
shrc Shore::readlink(const char *path,
                     char *buf,
                     int bufsize,
                     int *resultlen);
```

DESCRIPTION

>   **Readlink** copies the character string out of the symbolic link object named by **path** into the buffer given by *buf.* At most *bufsize* characters are copied. Upon return, *resultlen* indicates the actual number of characters copied. The resulting string is null-terminated only if the actual length of the string is less than *bufsize.*

VERSION

>   This manual page applies to Version 1.1 of the Shore software.

SPONSORSHIP

>   The Shore project is sponsored by the Advanced Research Project Agency, ARPA order number 018 (formerly 8230), monitored by the U.S. Army Research Laboratory under contract DAAB07-91-C-Q518.
